

TCL Tech Solutions

Field Operations App

Every function of the application, with the exact in-app path to reach it. Written for App Review, field technicians, and operations administrators.

VERSION	1.0.0	BUILD	1	UPDATED	DD MMM 2026	BUNDLE	com.tcltech.tcl
---------	-------	-------	---	---------	-------------	--------	-----------------

Where to find each capability

This section answers the App Review request directly. Each capability below links to a step-by-step location guide with the exact navigation path. Sign in with the demonstration account, then follow any path.

Demonstration account

TECHNICIAN — EMAIL

tech.demo@tcltechsolutions.com

TECHNICIAN — PASSWORD

ReviewPass2026!

ADMINISTRATOR — EMAIL

admin.demo@tcltechsolutions.com

ADMINISTRATOR — PASSWORD

ReviewPass2026!

BEFORE SUBMITTING

Both accounts must exist, be email-verified, and be seeded with sample data: at least three work orders in differing states, one completed job with photos and a signature, and two active projects. An account that requires email verification the reviewer cannot complete is itself a common cause of a 2.1 rejection.

Capability index

#	CAPABILITY REQUESTED	WHERE IT LIVES	STATUS
T1	<u>Receive assigned work orders</u>	Jobs tab → assigned list	● CONFIRM
T2	<u>Upload installation photos</u>	Job detail → Photos → Add	● CONFIRM
T3	<u>Record job notes & progress</u>	Job detail → Notes	● CONFIRM
T4	<u>Complete installation checklists</u>	Job detail → Checklist	● DOCUMENTED
T5	<u>Capture completion sign-offs</u>	Job detail → Complete → Signature	● CONFIRM
T6	<u>Update job status in real time</u>	Job detail → Status	● DOCUMENTED
A1	<u>Monitor all active projects</u>	Platform → Project Tracker	● DOCUMENTED
A2	<u>Review technician submissions</u>	Platform → Service Orders → detail	● CONFIRM
A3	<u>Track operational metrics</u>	Platform → Dashboard	● DOCUMENTED
A4	<u>Manage workflows & reporting</u>	Platform → Clients / Proposals / Profit	● DOCUMENTED

The application presents a different home screen depending on the signed-in account's role. Role is assigned server-side and cannot be changed from within the app.

Technician

Field staff. Sees only the work assigned to them. Can record work performed, capture evidence, and advance job status. Cannot view financial data, client records, or other technicians' assignments.

Administrator

Operations staff. Sees every project, work order, and technician submission across the organization, plus metrics, client records, proposals, and reporting.

CONFIRM BEFORE PUBLISHING

The backend role list is `admin`, `moderator`, `user`. There is no distinct `technician` role. Confirm which stored role the app treats as a technician, and update this section to match. If the reviewer signs in and sees an interface that contradicts this page, the rejection will repeat.

Sign in with the technician account. The app opens on the **Jobs** tab, which lists only the work assigned to the signed-in technician. Every capability below begins from that screen.

T1

Receive assigned work orders

● CONFIRM

Reviewer asked: *Receive assigned work orders.*

NAVIGATION PATH

Sign in —●— Jobs tab —●— Assigned list

- 01 Sign in with the technician demonstration account.
- 02 The app opens on the **Jobs** tab (first icon in the bottom tab bar).
- 03 Work orders assigned to this technician appear as cards, newest first. Each card shows the job title, client, priority, scheduled date, and current status.
- 04 Use the segmented control at the top to filter by **Open**, **In Progress**, and **Completed**.
- 05 Pull down to refresh. Newly assigned orders arrive without reinstalling the app.
- 06 Tap any card to open the **Job detail** screen, the hub for capabilities T2 through T6.

DATA SOURCE

Table **service_orders** — fields **title**, **description**, **priority**, **status**, **technician**, **scheduled_for**, **time_spent**, linked to **clients**.

CONFIRM BEFORE PUBLISHING

In the backend, **service_orders.technician** is a free-text name, not a reference to a user account. Confirm the app can filter work orders to the signed-in technician. If it cannot, the reviewer will see either every order or none, and neither matches the claim above.

T2

Upload installation photos from the field

● CONFIRM

Reviewer asked: *Upload installation photos from the field.*

NAVIGATION PATH

Jobs tab — Job card — Photos — Add photo

- 01 Open any job from the **Jobs** tab.
- 02 Scroll to the **Photos** section of the job detail screen.
- 03 Tap **Add photo**. Choose **Take photo** to use the camera on site, or **Choose from library**.
- 04 iOS requests camera and photo library permission the first time. Both prompts explain why access is needed.
- 05 Add an optional caption, then tap **Upload**. The photo attaches to this work order and becomes visible to administrators.
- 06 Uploads captured without signal are queued and sent automatically when connectivity returns.

CONFIRM BEFORE PUBLISHING — HIGHEST RISK ITEM

No file storage bucket and no photo or attachment field were found in the backend. If photo upload is not present in the submitted build, do not describe it here. Either ship the feature and resubmit, or remove this claim from the manual and from the App Store description. Directing a reviewer to a screen that does not exist converts a 2.1 into a metadata rejection.

T3

Record job notes and progress updates

● CONFIRM

Reviewer asked: *Record job notes and progress updates.*

NAVIGATION PATH

Jobs tab — Job card — Notes

- 01 Open a job from the **Jobs** tab.
- 02 Scroll to the **Notes** section.
- 03 Tap **Add note** and type the update — parts used, conditions found, work remaining.
- 04 Tap **Save**. The note is stamped with the author and time, and appears in reverse-chronological order.
- 05 Enter hours worked in **Time on job** to record labor against the order.
- 06 Saved notes are immediately visible to administrators reviewing the order.

DATA SOURCE

Table **service_orders** — fields **description**, **time_spent**, **updated_at**.

CONFIRM BEFORE PUBLISHING

The backend has a single **description** field on the work order, not a timestamped notes log. If the app overwrites one field rather than appending entries, describe it as "job notes" and remove the wording about a running history.

T4

Complete required installation checklists

● DOCUMENTED

Reviewer asked: *Complete required installation checklists.*

NAVIGATION PATH

Jobs tab — Job card — Checklist

- 01 Open a job from the **Jobs** tab.
- 02 Scroll to the **Checklist** section. Items appear in the order the office defined them.
- 03 Tap a row to mark it complete. A gold check replaces the empty box and the progress counter advances, for example **4 of 9 complete**.
- 04 Tap again to clear an item if it was marked in error.
- 05 A job cannot be marked **Completed** until every required item is checked.

DATA SOURCE

Table **service_order_checklist** — fields **item**, **done**, **sort_order**, keyed to **service_order_id**.

T5

Capture sign-offs confirming completed work

● CONFIRM

Reviewer asked: *Capture sign-offs confirming completed work.*

NAVIGATION PATH

Job card — Complete job — Signature

- 01 Finish the checklist, then tap **Complete job** at the bottom of the job detail screen.
- 02 The sign-off sheet opens with a summary of work performed.
- 03 Hand the device to the client. They sign with a finger in the signature panel.
- 04 Enter the signer's printed name and role, then tap **Save sign-off**
- 05 The signature, name, and timestamp attach to the work order and the status moves to **Completed**.
- 06 Tap **Clear** to redo the signature before saving.

CONFIRM BEFORE PUBLISHING — HIGHEST RISK ITEM

No signature, sign-off, or completion-approval field was found in the backend. Confirm this screen exists in the submitted build. If it does not, remove this capability from the manual and from the App Store description before resubmitting.

T6

Update job status in real time

● DOCUMENTED

Reviewer asked: *Update job status in real time.*

NAVIGATION PATH

Jobs tab — Job card — Status

- 01 Open a job from the **Jobs** tab.
- 02 Tap the **Status** control at the top of the job detail screen.
- 03 Choose the new state: **Open**, **In Progress**, **On Hold**, or **Completed**.
- 04 The change saves immediately and the job card in the list updates to match.
- 05 Administrators see the new status on their dashboard without any further action by the technician.
- 06 Adjust **Priority** from the same screen when a job escalates on site.

DATA SOURCE

Table **service_orders** — fields **status**, **priority**, **updated_at**.

Sign in with the administrator account. An additional **Platform** tab appears in the tab bar. It is the operations suite and is the starting point for every capability below.

A1

Monitor all active projects

● DOCUMENTED

Reviewer asked: *Monitor all active projects.*

NAVIGATION PATH

Platform tab —●— Project Tracker

- 01 Sign in with the administrator demonstration account.
- 02 Tap the **Platform** tab, then **Project Tracker**.
- 03 Every project across the organization is listed with client, stage, and completion percentage.
- 04 Tap a project to see its task list, with each task's completion state.
- 05 Filter by stage to isolate active work from closed projects.

DATA SOURCE

Tables **projects** and **project_tasks** — fields **name**, **done**, **sort_order**.

A2

Review technician submissions, notes, and photos

● CONFIRM

Reviewer asked: *Review technician submissions, notes, and uploaded photos.*

NAVIGATION PATH

Platform tab —●— Service Orders —●— Order detail

- 01 Tap the **Platform** tab, then **Service Orders**.
- 02 Every work order appears, regardless of which technician it belongs to.
- 03 Tap an order to open it. The detail view shows the assigned technician, checklist progress, hours recorded, and current status.
- 04 Scroll to **Photos** to view field images, and to **Notes** to read the technician's written updates.
- 05 Scroll to **Sign-off** to view the captured client signature and printed name.

CONFIRM BEFORE PUBLISHING

This capability depends on T2, T3, and T5. Whatever is removed from those items must be removed here as well.

A3

Track operational metrics and job progress

● DOCUMENTED

Reviewer asked: *Track operational metrics and job progress.*

NAVIGATION PATH

Platform tab —●— Dashboard

- 01 Tap the **Platform** tab. The **Dashboard** opens by default.
- 02 Summary cards show open work orders, jobs in progress, completed this period, and active projects.
- 03 **Profit Analysis** reports margin by project, comparing quoted value against recorded labor and materials.
- 04 **Job Costing** breaks a single project into labor and materials against budget.
- 05 Tap any metric card to open the underlying records.

DATA SOURCE

Tables `service_orders`, `projects`, `project_tasks`, `profit_analyses`.

A4

Manage workflows and reporting

● DOCUMENTED

Reviewer asked: *Manage workflows and reporting across the organization.*

NAVIGATION PATH

Platform tab —●— Clients · Products · Proposals

- 01 From the **Platform** tab, choose a module from the menu.
- 02 **Client Management** — client records, contacts, and site history.
- 03 **Product Library** — the equipment catalogue with cost and sell pricing used to build quotes.
- 04 **Proposal Builder** — assemble a quote from catalogue items and produce a client-ready document.
- 05 **Profit Analysis** — margin reporting across projects.
- 06 Create a work order from a client or project record to assign new field work.

DATA SOURCE

Tables `clients`, `products`, `proposals`, `proposal_items`, `profit_analyses`.

Every screen in the application, what it does, and who can reach it.

SCREEN	PURPOSE	REACHED FROM	ROLE
Sign in	Email and password authentication. Includes password reset.	App launch	All
Jobs	Work orders assigned to the signed-in technician, filterable by status.	Tab bar	Technician
Job detail	Single work order. Status, checklist, notes, photos, sign-off.	Jobs → card	Technician
Photos	Field images attached to a work order.	Job detail	Technician
Sign-off	Client signature capture on completion.	Job detail → Complete	Technician
Platform Dashboard	Organization-wide operational metrics.	Platform tab	Administrator
Service Orders	All work orders across all technicians.	Platform menu	Administrator
Project Tracker	Active projects and task completion.	Platform menu	Administrator
Client Management	Client records and site history.	Platform menu	Administrator
Product Library	Equipment catalogue and pricing.	Platform menu	Administrator
Proposal Builder	Quote assembly and client documents.	Platform menu	Administrator
Profit Analysis	Margin reporting by project.	Platform menu	Administrator
Account	Profile, privacy consents, sign out, delete account.	Tab bar	All

CONFIRM BEFORE PUBLISHING

Screen names above are drawn from the platform module names in the codebase. Open the submitted build and correct any label that differs. A reviewer looking for "Jobs" who finds "My Work" will report that the feature is missing.

05

Troubleshooting

Common conditions and how to resolve them.

The Jobs list is empty

No work orders are assigned to this account, or every order is filtered out. Clear the status filter, then pull down to refresh.

The Platform tab is missing

The signed-in account is not an administrator. Sign out and sign in with an administrator account.

A photo will not upload

Confirm camera and photo permission in iOS Settings → TCL Tech Solutions. Queued uploads send automatically when signal returns.

The job will not complete

Every required checklist item must be checked, and a sign-off captured, before the status can move to Completed.

Sign-in fails

Confirm the address is verified. Use **Forgot password** to reset; the link opens the app directly.

Data looks stale

Pull down to refresh on any list. The app reads live data and holds no long-term local cache.

06 Support

Direct contact for App Review and for field staff.

Telephone

Company

TCL Tech Solutions — The Connected Lifestyle
Veteran-owned · San Antonio, Texas

Privacy

Field photographs and job records are visible only to the assigned technician and administrators. Accounts can be deleted in-app from the Account tab.

Reply to paste into App Store Connect

Edit the placeholders, then paste into the App Review message thread.

Hello,

Thank you for the follow-up. A complete operations manual for the app is published here:

<https://tcltechsolutions.com/app-manual>

It documents every function with the exact in-app navigation path. Direct links to each item you asked about:

TECHNICIAN

1. Receive assigned work orders /app-manual#t1
2. Upload installation photos /app-manual#t2
3. Record job notes and progress /app-manual#t3
4. Complete installation checklists /app-manual#t4
5. Capture completion sign-offs /app-manual#t5
6. Update job status in real time /app-manual#t6

ADMINISTRATOR

1. Monitor all active projects /app-manual#a1
2. Review technician submissions /app-manual#a2
3. Track operational metrics /app-manual#a3
4. Manage workflows and reporting /app-manual#a4

Demonstration accounts, both email-verified and seeded with sample data:

Technician [EMAIL] / [PASSWORD]
Administrator [EMAIL] / [PASSWORD]

Signing in with the administrator account reveals the Platform tab, which contains the organization-wide screens described above.

Please let me know if any further detail would help.

Best regards,
Phil Russell
